

Claim the **lion's share of profits** hiding in your waste materials.

Start seeing waste materials differently.

Cost cutting? Start with waste.

In times of uncertainty, what you throw away could be costing you far more than you realise. Waste isn't just about bins and collections; it quietly drains profit, wastes staff time, and ties up valuable resources in inefficient processes.

While most businesses focus on cutting staff or output, forward-thinking companies are uncovering savings by rethinking waste.

Axil helps businesses turn waste into savings, efficiency, and even revenue. From physical waste to the hidden inefficiencies buried in your processes, we uncover and eliminate what's holding your operation back.

Our approach transforms waste from a cost centre into a cost-saving engine; delivering fast, measurable impact and building long-term resilience.

“ Axil is a one-stop-shop for waste management. Their innovative approach drives out costs and we have a good working partnership that means we both win! **”**

Matthew Patridge

Head of Supply Chain Finance UK & Ireland

How Axil reduces your waste and recycling costs

We optimise waste segregation to lower landfill costs and increase recycling rebates. By carefully separating recyclables from general waste, we reduce costly landfill fees and boost rebate opportunities.

We use real-time data to cut waste inefficiencies and improve recycling performance. Data-driven insights help us identify inefficiencies and adjust collection schedules for maximum savings.

We install balers and compactors to reduce collections and increase the value of recyclables. These onsite machines shrink waste volume, cutting collection frequency and enhancing the market value of materials like cardboard and plastics.

We train staff to improve segregation, leading to cleaner waste and higher rebates. Proper employee education reduces contamination, which means higher quality materials and better returns.

Waste as a strategic advantage

Did you know many companies overlook how waste can be a profit centre? Axil goes beyond compliance to actively support zero-to-landfill strategies and circular economy initiatives.

We help repurpose waste into energy or raw materials for new products, helping you avoid landfill taxes and tap into circular economy rebates or compliance schemes.

- We turn waste into resources to avoid landfill costs and unlock circular economy rebates.
- We consolidate all your waste services to reduce costs and improve recycling returns.
- We streamline on-site processes to cut labour costs and eliminate waste handling inefficiencies.

TYPICAL WASTE TOUCH POINTS

It's important to consider the "foot miles" of your waste, which often has 6-7 touchpoint before reaching its final recycling or disposal destination.

Reducing double handling on site can cut out 2-3 touchpoints, and create efficiency improvements while reducing labour time spent moving waste materials around site unnecessarily.

Why Axil? We're not a traditional waste company

Axil sets itself apart from traditional waste companies by taking a partnership-based, integrated approach that focuses not just on removing waste but on optimising entire waste systems to cut costs, boost sustainability, and improve efficiency.

Traditional Providers	 Integrated Approach
Transactional collections	✓ Strategic partnership
Fixed bin types and schedules	✓ Tailored, site-specific solutions
Little visibility or data	✓ Real-time analytics and KPIs
Limited focus on rebates	✓ Active rebate generation
Offsite-only services	✓ On-site operatives and embedded support
Retail/commercial focused	✓ Industrial and complex waste expertise

Ready to reduce costs? Start with a free waste audit

Axil's initial waste audit identifies:

- Underused assets
- Missed rebate opportunities
- Inefficient processes
- Savings from vendor consolidation
- Opportunities for leaner waste movement

Our thorough audit uncovers hidden savings and actionable steps to streamline your waste management, so you start saving immediately.

" Axil actively participates in our monthly review meetings, they are well-prepared, and consistently seek cost-saving and environmental solutions. They provide valuable support with portal data, while managing it with great attention to detail. "

Diane Tolley
ESH Manager, Aquapac

Start cutting costs today, where others aren't even looking. Do it through waste.
